PROFILE

Computer Engineering graduate (2026) with hands-on experience in Machine Learning research at DRDO's Defence Institute of Advanced Technology (DIAT), and in developing VR applications and frontend web interfaces. Strong foundation in C++, SQL, Git/GitHub, and Data Structures & Algorithms, with growing expertise in AI and GenAI development.

EXPERIENCE

Research Intern — Defence Institute of Advanced Technology (DIAT), DRDO

Jan 2026 – Apr 2026

Pune, Maharashtra

- Evaluated 5 publicly available gait datasets and compared Machine Learning and Deep Learning approaches for biometric identification.
- Built and validated data preprocessing and feature-extraction pipelines for gait sequences, improving downstream model readiness and establishing a repeatable workflow for future experiments.
- Conducted a literature review of 25+ research papers to identify feature extraction techniques and surface open research gaps, guiding the project's next phase.
- Collaborated with 2 faculty mentors and documented experimental methodology to support reproducible, biometric identification research.

PROJECTS

Virtual Mental Health Assistant (VR) | Unity (C#), MongoDB, MySQL

- Designed and developed a VR-based mental health assistant in Unity (C#) over a 4-month development cycle as part of a 4-member team.
- Built 5 immersive VR scenes and implemented 6 guided mindfulness exercises — including meditation, breathing, relaxation, mood check-in, and guided reflection modules — to support stress relief and relaxation.
- Integrated MongoDB and MySQL to manage 40+ user session records and interaction history, including a feature retaining the user's last 10 interactions for contextual guidance.
- Conducted usability testing with 12 participants across 3 testing iterations, improving navigation flow and reducing user confusion during VR sessions.

Ticket Booking Web Application | HTML, CSS, JavaScript

- Built a responsive ticket booking web application with a structured, user-friendly interface, ensuring consistent behavior across desktop and mobile devices.
- Implemented client-side form validation that caught invalid entries before submission, reducing failed bookings and unnecessary back-and-forth for users.
- Streamlined the end-to-end booking workflow, simplifying the sequence of steps needed to search, select, and confirm a ticket.

EDUCATION

B.Tech in Computer Engineering — G H Raisoni College of Engineering and Management

Nov 2022 – Jun 2026

Pune, Maharashtra | CGPA: 7.44 / 10

TECHNICAL SKILLS

Languages: C++, Java, SQL, JavaScript

Frontend: HTML, CSS, JavaScript

Database: MySQL, MongoDB

Tools & Platforms: Git, GitHub, VS Code, Unity

Foundations: Data Structures & Algorithms, Machine Learning, Deep Learning

CERTIFICATIONS

- SQL (Intermediate) Certification — HackerRank
- IBM Enterprise Data Science Certification — 2024

ACHIEVEMENTS

- Solved 100+ Data Structures and Algorithms problems on LeetCode, building strong fundamentals in problem-solving and algorithmic thinking.

LEADERSHIP & ACTIVITIES

- Event Management Volunteer, Aamir Khan Productions — Led a team of 20 volunteers for the promotional event for the film Laapataa Ladies, coordinating logistics and on-ground execution.
- Cultural Committee Member, GHRCEM — Coordinated planning and execution of college cultural events from concept through delivery.
- IEEE Student Member, GHRCEM — Participated in technical workshops and student-branch activities.
